## Before you start

The **Engine** indicator must be green: it's the AI that listens and draws the captions. It starts by itself.

## 1 · Transcribe

Open the sequence and click **Transcribe**. With In and Out (I / O) set, only that range is transcribed. “Automatic” detects the language; choosing it yourself is slightly more accurate.

## 2 · Review

Click a word: **highlighted** (another color), then **censored** (symbols and bleep). Double-click to fix it; Enter saves. **Words per caption** regroups instantly without transcribing again.

## 3 · Style

Pick a preset or adjust font (searchable), animation, size, height, outline and colors. Save your own presets.

## 4 · Insert

**Fast**: one image with a pop per caption, almost instant. **Full animation**: transparent .mov with per-word animation. They always go on an empty track **above all your video**; they never overwrite another layer. Each speaker gets their own track.

## Where are files saved?

In the project folder: `CerratoCaptions_Renders\<sequence>` (or `C:\Program Files\CerratoStudio\CerratoCaptions\data\renders` if the project isn't saved). Button **Open folder**.

## If something fails

Gear → **Open log** and send it.
