CerratoTracker

User guide

Plugin for Adobe Premiere Pro · Windows · Version 1.3.3

1 · Track in Premiere

In **Effect Controls** draw a mask over what you want to follow (a head, a badge…) and click **Track ▶**. Shape masks (ellipse, rectangle, pen) and AI object masks work.

2 · Pick the mask

Click **Read masks** (it saves the project and reads them) and click the one you want. A clip can have several.

3 · Paste the tracking

Select your text or PNG on the timeline, place it where you want on the playhead frame and click **Paste tracking**. Choose Position, Scale or Rotation and how much to smooth.

Stabilize

Stabilize video applies the inverse motion so the tracked object stays still. Raise the Scale to hide the edges.

Undo

Select the clip and click **Remove keyframes**.
